Dear Hiring Manager,

I am applying for the AI Engineer role at Aceve.

At FlowSpace, I built and owned the AI systems that let a small team do more with the same headcount. I built an LLM extraction pipeline that reads brochures in any format, PDF, website, spreadsheet or photo, and drafts structured listings validated by a human reviewer, producing over 900 listing records for a live marketplace. I built support AI agents backed by retrieval over live platform data, with confidence scoring that escalates to a human when the model is unsure. I shipped n8n automations for lead capture and outbound, and integrated OfficeRnD and Nexudus for automated bookings. My stack is Python and TypeScript, and I use Claude Code daily.

Aceve's AI Transformation Team does this work at group scale, owning internal AI products end to end from scoping through deployment. That full lifecycle ownership is what I have spent two years doing.

I am based in Venice, Italy. I hold Italian EU long term resident status, which does not itself grant Dutch work rights, so I would need the employer side highly skilled migrant permit. I am ready to relocate or work remotely from Italy.

Regards,
Prabhavit Gupta
