Dear ActAI team,

I am applying for the Full Stack Engineer, AI systems role in Spain.

The role description is the product layer I have been building for two years. At FlowSpace (coworking marketplace, London) I built the LLM pipeline that turns any operator brochure (PDF, website, photo, spreadsheet) into a validated listing after human review, 900+ listings so far, and the RAG support agents that answer availability and pricing questions from live data and hand off to a person when confidence is low. Both are multi-step agent workflows with planning, tool use, failure handling and recovery, running in production for thousands of users, and both were improved by iterating on real failure modes rather than demos. I also shipped the OfficeRnD and Nexudus API integrations that connect bookings to the systems operators already run, and I helped move the platform off a legacy stack onto Next.js and Laravel while it stayed live.

My production work centers on TypeScript, Laravel, Next.js migration and oversight, REST and external API integrations, n8n, Supabase, and LLM and RAG workflows. Claude Code is my primary development tool. Python is an active learning area rather than an established day-to-day production language, and I am ready to deepen it for this role. I care about dependable AI products: structured outputs, human review and escalation, clear failure handling, and iterative improvement on real inputs.

Logistics: I am based in Venice, Italy, hold an Italian EU Long Term Residence Permit, and am ready to relocate to Spain. The applicable employer-side work authorization and sponsorship process for Spain would be needed, and I am ready to complete it. English is my professional working language. Available immediately.

A runnable sample of how I build: github.com/prab-gupta/llm-doc-parser. CV attached.

Regards,
Prabhavit Gupta
