Dear Adobe hiring team,

I am applying for the Forward Deployed Engineer, Agents & Apps role in Bucharest. I work directly with live systems and real users, turning ambiguous workflows into production AI systems that teams adopt daily.

At FlowSpace, I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data model to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500+ users. I built and own an AI listing bot that reads a workspace provider's brochure in any format (PDF, website, photo or spreadsheet) and drafts a structured listing with a human in the loop, producing over 900 drafts, plus support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result reaches the frontend, and a standardised Ultra CV is generated. I used Affinda and the Claude API for the parsing and generation, and n8n and Eden AI for the extraction tool itself.

Both roles meant closing the gap between a working prototype and a reliable system in daily use by real engineering teams, which is what forward deployed work at Adobe asks for.

I hold Italian EU long-term resident status. I am not currently authorised to work in Romania and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

Regards,
Prabhavit Gupta
