Dear Advisense Hiring Team,

I am writing to apply for the Forward Deployed AI Engineer role. Much of what you describe, owning a module from design through to a client running it, using AI as a working tool rather than a black box, and being the one who connects a client's real data to the platform, is close to the work I have been doing for the last three years across a run of European projects.

At FlowSpace, a live workspace marketplace, I took over the platform and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the user base from 2,000 to 4,500 plus. I mapped the old data structure to the new one, chose the migration path per entity through API endpoints or CSV exports, and drove the cutover myself. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, and shipped the OfficeRnD and Nexudus API integrations behind automated bookings, so I am used to being accountable for a workflow once it is running in front of real users.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific types of roles, the result is delivered to the frontend, and an Ultra CV is generated from it, using Affinda and the Claude API for the parsing and generation, with n8n and Eden AI behind the extraction tool. Day to day I write TypeScript and Python, mostly for automation, data pipelines and LLM integration work, and I use AI-assisted development tools, including Claude Code, as a normal part of building and shipping.

I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and to work on-site with your clients as the role requires.

I would welcome the opportunity to discuss how I could contribute to Advisense's tech development team.

Regards,
Prabhavit Gupta
