Dear Agile Robots Hiring Team,

I am applying for the Forward Deployed Engineer for Robotics role in Munich.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the platform from 2,000 to over 4,500 users. I built and own an AI listing bot that takes a provider's brochure in any format and drafts a full structured listing with a human in the loop, over 900 drafts produced, and support AI agents that ground answers in live platform data and escalate to a human on low confidence. I have owned production AI systems end to end for a real client, in a role where I am the direct technical interface when something breaks.

At UltraStrategy, I built a CV-parsing pipeline where a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and scores how relevant the candidate is for specific role types, the result is delivered to the frontend, and a standardised profile is generated. That is the pattern this role asks for on the software side: integrating an AI model into a working, customer-facing pipeline and making it reliable in production, on n8n and Eden AI.

I want to flag a gap directly. I have not worked with robot arms, AGVs, grippers or other robotic hardware, and I do not have hands-on experience with C++, Vision-Language-Action models or NVIDIA embedded platforms. My programming has been in TypeScript and Python for automation and data pipelines rather than robotics. What I can bring is three years of customer-facing technical delivery, fast learning in unfamiliar domains, and the AI-integration pattern above, applied to a different hardware layer.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Munich and complete that process.

Regards,
Prabhavit Gupta
