Dear Aieng hiring team,

I am writing to apply for the AI Engineer role in Rome. I work in Python building LLM pipelines, document ingestion and agentic workflows, and I like that Aieng treats AI as an active participant in the engineering process rather than a bolt-on feature.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant the candidate is for specific role types, the result reaches the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API. At FlowSpace, a workspace marketplace, I built an AI listing bot on n8n and the Claude API that ingests a provider brochure in any format, PDF, website, photo or spreadsheet, and drafts a full structured listing with a human in the loop, producing over 900 draft listings in production. I also built support AI agents there that retrieve live platform data to answer customer queries and escalate to a human on low confidence.

I have not worked with vLLM or Ollama directly, but the underlying pattern, moving a model or a pipeline from a proof of concept into something reliable enough for daily production use, is exactly what I have been doing across these roles, and I pick up new inference tooling quickly.

I hold an Italian EU Long Term Residence Permit, so I am authorised to work in Italy without sponsorship, and I am available for the hybrid Rome schedule.

I would welcome the opportunity to discuss how I could contribute to the Aieng team.

Regards,
Prabhavit Gupta
