Dear Aircall team,

I am writing to apply for the Forward Deployed Engineer, AI Solutions role. I have three years of experience building production automation and AI systems directly with clients, taking a proof of concept from first use case to something that runs reliably in a real workflow.

At FlowSpace, I streamlined customer support with AI agents and built the CRM integration that consolidated leads and automated lead capture, plus GTM automations for the sales funnel, lead enrichment and outbound, all on n8n. I also shipped the OfficeRnD and Nexudus API integrations for automated bookings and an AI tool that processes and scrapes data to grow the listings on the platform. The product stayed live throughout while I drove its migration off a legacy stack onto Next.js and Laravel, growing from 2,000 to 4,500 plus users.

At Get2Germany, I built AI based automation tools that find courses, internships and jobs and integrated Google APIs for tracking across the platform, close to the kind of applied AI tooling and API work this role asks for.

I use Claude and Claude Code daily in my own workflow and I am comfortable with APIs, webhooks and JSON end to end. I hold Italian EU long-term resident status and would need the applicable employer side permit or sponsorship process to work in France. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to Aircall's Forward Deployed Engineering team.

Regards,
Prabhavit Gupta
