Dear Airweave team,

I am writing to apply for the Founding Forward Deployed Engineer role. I have three years of experience taking a live product into a customer's own environment and making it work there, which is what this role is really asking for.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel while the product stayed live in production and grew from 2,000 to 4,500 plus users, including OfficeRnD and Nexudus API integrations for automated bookings. I also built and own an AI listing bot that takes a brochure in any format from a workspace provider and drafts a full listing with a human in the loop, using the Claude API and TypeScript.

At Urlink, I worked as project manager and AI-assisted developer on a Barcelona-based platform, building the platform logic with AI-assisted development and implementing automations driven directly by client requirements, on Next.js, Supabase, Netlify and GitHub. That role, like this one, meant sitting close to what a specific customer actually needed and shipping for it rather than for a generic user.

I am comfortable with Python, APIs and databases, and I like the kind of ambiguous, undocumented problem this role describes. I hold Italian EU long-term resident status. I am not currently authorised to work in the Netherlands and would need the applicable employer-side permit or sponsorship process; I am ready to relocate to Amsterdam and complete that process, and I am glad to travel to customer sites across Europe as the role requires.

I would welcome the opportunity to speak with the team about how I could contribute to Airweave.

Regards,
Prabhavit Gupta
