Dear Hiring Manager,

I am applying for the Forward Deployed Engineer role at Akeneo in Nantes.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and choosing the migration path per entity while the product stayed live, growing the platform from 2,000 to over 4,500 users. Alongside that I shipped OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations for lead capture and routing, and I built an AI listing bot that takes a workspace provider's brochure in any format and drafts a full structured listing with a human in the loop. That is the same shape of work this role describes: assess an existing system, design the integration or migration path, and ship glue code that holds up in production rather than a demo.

At Urlink, I worked as project manager and AI-assisted developer on a client engagement, building the platform and its logic on Next.js and Supabase and implementing automations against the client's own requirements as they came in. That direct, embedded relationship with a non-technical client is close to the "on the front lines" way this role is described, translating what a business team needs into something a developer can actually build.

I have three years of professional experience across eight European companies, most of it as an embedded, client-facing developer working directly with non-technical stakeholders and small delivery teams rather than inside a large in-house engineering org. I am comfortable moving between PHP/Laravel, TypeScript and Node depending on what a client's stack needs, and I lean on AI-assisted development day to day to move from proof of concept to something that runs cleanly.

I hold Italian EU long-term resident status. I am not currently authorised to work in France and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and I am comfortable with the travel to client sites this role describes.

Regards,
Prabhavit Gupta
