Dear Hiring Manager,

I am applying for the Fullstack Software Engineer, Work Environment role at Alan.

At FlowSpace I built and owned the internal-facing side of a live coworking platform: a Next.js and TypeScript front end, a Laravel backend, and Python for backend and automation work, on top of Supabase and PostgreSQL. I built an AI listing pipeline that has drafted over 900 workspace listings from unstructured broker data, RAG-backed support agents that escalate to a human on low confidence, and integrations with OfficeRnD and Nexudus for automated bookings. I use Claude Code daily as my primary tool for shipping and iterating quickly.

The Work Environment team's brief, replacing generic internal tools with AI-native software every employee touches daily, is close to what I already do: building the plumbing that decides whether an internal system actually works. Alan's written, distributed culture and its AI-native approach to building for real daily usage is what draws me to this role.

I hold Italian EU long-term resident status. I am not currently authorised to work in Spain, France, or Belgium and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

Regards,
Prabhavit Gupta
