Dear Albatross AI hiring team,

I am applying for the Forward Deployed Engineer role on your go-to-market team. I have three years of experience sitting between engineering and the customer, taking a working system and adapting it to a real client's data and workflow until it is live in production.

At FlowSpace, I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data model to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500+ users. I built and own an AI listing bot that reads a workspace provider's brochure in any format (PDF, website, photo or spreadsheet) and drafts a structured listing with a human in the loop, producing over 900 drafts, plus support AI agents that answer customer queries from live platform data and escalate to a human on low confidence. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At Get2Germany, I integrated Google APIs and built AI tools that find courses, internships and jobs for users, and optimised the underlying database so the discovery results stayed accurate as the data grew. Stack: n8n, Google APIs.

Both roles required understanding a client's data before I could adapt a platform to it, then staying with the deployment through to something the client's team relied on daily, which is the shape of work this role describes.

I hold Italian EU long-term resident status and am authorised to work from Italy. I am open to relocating anywhere in the EU and comfortable with the customer-facing, travel-inclusive nature of the role.

Regards,
Prabhavit Gupta
