Dear AlphaOmega Hiring Team,

I am writing to apply for the Software Engineer, Python role on the Mystic Back-End Team. I have three years of professional experience building backend automation tools and data pipelines, and this role's mix of distributed systems, data ingestion and continuous delivery is close to what I have been doing.

At FlowSpace, a workspace marketplace, I led the automated migration of the platform's data off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, chose the migration path per entity, either API endpoints or CSV exports, and drove the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built an AI tool that ingests brochures and web pages in any format and turns them into structured listing data, with a human in the loop, over 900 produced so far.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores the candidate's fit for specific role types, and the result is delivered to the frontend before a standardised Ultra CV is generated. Affinda and the Claude API handled the parsing and generation, and n8n and Eden AI powered the underlying automation.

I write in Python, TypeScript and PHP, I am comfortable with SQL and Git, and I like the discipline of testing and documenting a system well enough that someone else can maintain it. I hold Italian EU long-term resident status. I am not currently authorised to work in Luxembourg and would need the applicable employer-side permit or sponsorship process, and I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Mystic Back-End Team.

Regards,
Prabhavit Gupta
