Dear Analog Devices hiring team,

I am applying for the Senior Principal Forward Deployed Engineer role in Limerick. I have three years of professional software engineering experience, all of it customer facing, embedding with a real product and a real user base rather than shipping in isolation. I know the listing asks for a much longer track record, and I want to be direct about that: three years is the honest number, and I am applying because the shape of the work, not the tenure, is what I can already do.

At FlowSpace I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that takes a provider's brochure in any format and drafts a structured listing with a human in the loop, plus support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, all running in production against real traffic.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated. Affinda and the Claude API handled the parsing and generation, with n8n and Eden AI for the surrounding orchestration and data pipeline work.

I hold Italian EU long-term resident status. I am not currently authorised to work in Ireland and would need the applicable employer-side permit or sponsorship process, since the EU long-term-resident mobility route does not extend to Ireland. I am ready to relocate and complete that process.

I would welcome the chance to talk through how I would approach embedding with one of your strategic customers and turning their edge and AI requirements into production code.

Regards,
Prabhavit Gupta
