Dear Arize AI hiring team,

I am applying for the AI Sales Engineer, EMEA role. I am based in Venice, Italy and I have three years of hands-on AI and full-stack engineering, most of it customer-facing, exactly the shape Arize looks for in an SE for its observability platform.

The kind of work I do at FlowSpace is the kind of demo an Arize SE ends up walking through with a customer. I built and own an AI listing pipeline in production: it takes unstructured input (PDF, website, image, spreadsheet), runs an LLM extraction, applies confidence scoring, and pushes the structured result to the backend after human review. On top of that I run support AI agents that answer customer queries against live platform data and escalate on low confidence. Every one of those systems needs the observability story that Arize sells: what did the model see, why did it answer this way, what is the confidence, where did it drift. I have lived that problem, and I can explain it to a technical buyer without a script.

The customer-facing half of the role is native to my career. I have delivered for the operational teams and end users at FlowSpace, for the client at Urlink, and for the internal team plus an external agency during the FlowSpace platform migration; three years of that in a row. Integrations across OfficeRnD, Nexudus, Google APIs, Sendgrid, Attio, Amplemarket, Swan and Stripe are the concrete work; the pattern is discovery, scope, ship, keep it running. I code daily in TypeScript, Node.js and Python, so a customer POC on Arize would land as a real prototype rather than a slide.

I am authorised to work remotely from Italy under an EU Long-Term Residence Permit and require no sponsorship for the EMEA remote role. I am available immediately.

Kind regards,
Prabhavit Gupta
