Dear BASF hiring team,

I am writing to apply for the AI Engineer, Agentic Coding role in Madrid. Agentic coding tools are not something I have read about, they are my daily work: I use Claude Code and the Claude API to build and ship production features on a live platform, not a toy example.

At FlowSpace, a workspace marketplace, I use Claude Code as part of my daily development workflow, and I built an AI listing bot on n8n and the Claude API that takes a provider brochure in any format and drafts a full listing with a human in the loop, producing over 900 draft listings so far. I also built support AI agents that answer customer queries from live platform data and escalate to a human when confidence is low, and I led the automated migration of the platform's data off a legacy stack onto Next.js and Laravel while the product stayed live, growing it from 2,000 to 4,500+ users.

At UltraStrategy, I built a CV parsing pipeline with n8n and Eden AI: a user uploads a CV, the pipeline extracts the data and scores role fit, the result reaches the frontend, and a standardised Ultra CV is generated using Affinda and the Claude API. That work required understanding where an LLM pipeline is reliable and where it needs a human check, which is the same judgment this role asks for when evaluating a new model or agent feature against real problems rather than a demo.

I hold an Italian EU Long Term Residence Permit. I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process; I am ready to relocate to Madrid and complete that process. I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
