Dear Hiring Manager,

I am applying for the Visiting Forward Deployed AI Engineer, Italy role at BCG X in Milan.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to over 4,500 users. I built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full listing with a human in the loop, over 900 drafts produced, and support AI agents that ground answers in live platform data and escalate to a human on low confidence. I built these with the Claude API, n8n and TypeScript, and worked directly with the client team and an external agency to turn business requirements into shipped features, the kind of client-facing, production-first work this role asks for.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API, assesses how relevant the candidate is for specific role types, and a standardised profile is generated with n8n and Eden AI. I have three years of professional experience across eight European companies, most of it applying software development practices to ship AI features that clients actually use, rather than research.

I should be upfront on two points. My background is in applied LLM engineering, agents and API integrations rather than classical ML with TensorFlow, PyTorch or Scikit-learn, and I would build up that side on the job. My English is professional working proficiency and my Italian is conversational, not fluent, though I am comfortable working and communicating day to day in Italian.

I am an Italian EU long-term resident, authorised to work in Italy without sponsorship, and based in Venice with the flexibility to work from Milan as needed.

Regards,
Prabhavit Gupta
