Dear BLP Digital Hiring Team,

I am writing to apply for the Forward Deployed Engineer role in Copenhagen. I have three years of professional experience shipping production systems end to end for real clients, owning the build and the client relationship together.

At FlowSpace, a workspace marketplace, I took over a live platform and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500+ users. I built and own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, and I built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, alongside the OfficeRnD and Nexudus API integrations that power automated bookings. Stack: TypeScript, Next.js, Laravel, n8n, the Claude API, Claude Code.

At Urlink, I worked as project manager and AI assisted developer on a freelance basis. I built the platform and its logic with AI assisted development and implemented automations driven directly by client requirements, while owning the client relationship on requirements myself. Stack: Next.js, Supabase, Netlify, GitHub, bolt.new. This is the closest match I have to taking a client's messy problem to a working production system end to end, which is how this role is described.

I hold Italian EU long-term resident status. I am not currently authorised to work in Denmark and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Forward Deployed Engineer team.

Regards,
Prabhavit Gupta
