Dear Bamboo Works team,

I am writing to apply for the AI Automation Specialist (Claude and Accounting Workflows) role. I build production AI agents and automation systems with Claude, using human in the loop review and confidence based escalation, which is the pattern this role calls for.

At FlowSpace, a coworking marketplace, I built and own an AI listing bot: it takes a workspace provider's brochure in any format, PDF, website, photo or spreadsheet, and drafts the full listing with a human in the loop before it reaches the backend, producing more than 900 draft listings. I also built support AI agents that answer customer queries from live platform data and escalate to a human whenever their confidence is low, and I shipped OfficeRnD and Nexudus API integrations for automated bookings alongside CRM and GTM automations. The stack was n8n, the Claude API and TypeScript.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and assesses how relevant the candidate is for specific role types, the result is shown in the frontend, and the pipeline then generates a standardised Ultra CV. The parsing tool itself was built with n8n and Eden AI, and I also built the platform serving the different user profiles.

I work daily in Python and Claude Code, and I am comfortable operating independently as a contractor, prioritising with a client, and moving from a business idea to a working automation quickly. I am based in Italy and can adapt my schedule to overlap with Australian working hours for calls and reviews.

I would welcome the chance to discuss how this experience applies to your accounting automation platform.

Regards,
Prabhavit Gupta
