Dear Berg Search Hiring Team,

I am writing to apply for the Forward Deployed Engineer role you are recruiting for on behalf of your client, an AI platform company building agentic AI solutions for enterprise customers. I have three years of experience building and deploying AI agents in production and working directly with customers to operationalise them.

At FlowSpace I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data structure onto the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500plus users. I built and own a support AI agent that answers customer queries directly from live platform data and escalates to a human on low confidence, and an AI listing bot that turns a workspace provider brochure in any format into a structured, human-reviewed listing, with 900plus drafts produced. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API, plus OfficeRnD and Nexudus API integrations.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and assesses how relevant the candidate is for specific role types, the result is shown in the frontend, and a standardised Ultra CV is then generated. Affinda and the Claude API were used for the parsing and generation, and the extraction tool itself was built with n8n and Eden AI.

Both roles combined systems integration, production ownership and direct customer contact, which is exactly the mix this role is built around.

I hold Italian EU long-term resident status. I am not currently authorised to work in Greece and would need the applicable employer-side permit or sponsorship process; I am ready to relocate to Athens and to complete that process.

Kind regards,
Prabhavit Gupta
