Dear Hiring Team,

I am writing to apply for the Forward Deployed Robotics Engineer role in Freiburg. I want to be direct about fit: I have no robotics background and have not worked with action or VLA models. What I bring is three years of shipping AI-driven systems directly into production for real customers, embedded in their workflows rather than handed off as a demo, which is the part of this role that sits closest to what I already do well.

At FlowSpace, a live workspace marketplace, I built and own an AI listing bot that takes a provider's brochure in any format, PDF, website, photo or spreadsheet, and drafts a full structured listing with a human in the loop, over 900 drafts produced in production. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, plus OfficeRnD and Nexudus API integrations for automated bookings. All of this was built with the Claude API, n8n for orchestration and TypeScript, while the product stayed live and grew from 2,000 to over 4,500 users.

At Urlink, working as project manager and AI-assisted developer on a client engagement in Barcelona, I built the platform and its logic with AI-assisted development and implemented automations driven directly by client requirements, working on Next.js, Supabase, Netlify, GitHub and bolt.new. That role was about translating a customer's operational problem into a working build quickly and iterating with them in the loop, the same shape of work this role asks for, just applied to hardware and vision customers rather than a marketplace.

I am comfortable working on-site with customers for extended periods and enjoy being close to both the technical build and the people using it.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Germany and complete that process.

Regards,
Prabhavit Gupta
