Dear Brickanta team,

I am applying for the Solution Engineer - Integrations Focus role in Stockholm. Making a product useful inside a customer's existing systems is the part of engineering I find most engaging. Your combination of connector development, data mapping and customer deployment aligns with my experience in a live workspace marketplace.

At FlowSpace, I integrated OfficeRnD and Nexudus APIs for automated bookings and worked with the internal team and an external agency to resolve product and customer issues. I also helped migrate the platform from a legacy stack to Next.js and Laravel. That required understanding the existing data model and deciding how individual entities would move through APIs or CSV exports while the product stayed live. The platform grew from 2,000 to more than 4,500 users.

I also built an AI pipeline that turns brochures and other source material into draft listings for human review, producing more than 900 draft records. This gives me relevant experience connecting documents, structured data and application workflows. My strongest implementation language is TypeScript, alongside Python and API integration skills. Brickanta's work across tender documents, project data and procurement interests me because integrations must support the way customers actually operate. I would bring hands-on delivery and stakeholder coordination while learning your construction-specific systems.

I am based in Venice on CET/CEST, available immediately and ready to relocate to Stockholm. I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process.

Regards,
Prabhavit Gupta
