Dear CRIF hiring team,

I am applying for the GenAI Platform and Operations Engineer role in Bologna. I have three years of hands-on experience building Generative AI features across several European companies, working directly with LLM APIs including the Claude API and OpenAI, and I want to bring that applied GenAI background into your Cloud Engineering and Operations team.

At UltraStrategy, a French company, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API, scores how relevant the candidate is for specific role types, and delivers the result to the frontend, generating a standardised CV. This involved prompt engineering and orchestrating the API calls that kept the pipeline reliable in production.

At FlowSpace, a live workspace marketplace, I built and operate an AI listing bot that takes a brochure in any format and drafts a full listing with a human in the loop, using n8n and the Claude API, producing more than 900 draft listings. I also built support agents that answer customer questions from live platform data (a RAG pattern) with escalation to a human on low confidence, plus REST integrations with OfficeRnD and Nexudus.

I am upfront that my production experience sits on the application and API side of GenAI systems rather than cloud infrastructure administration, and I am not claiming hands-on Azure, AWS or Kubernetes experience. What I bring is real LLM and prompt engineering practice and a fast learning curve across eight roles in three years.

I am based in Venice, hold an EU Long Term Residence Permit, and am authorised to work in Italy without sponsorship. Available immediately and open to the Bologna hybrid arrangement.

Regards,
Prabhavit Gupta
