Dear CUBE team,

I am applying for the Frontend Engineer, Agentic AI role. Building the interface layer between a product and the AI systems behind it is what I have spent the last three years doing, in React, TypeScript and Next.js.

At FlowSpace, I own the frontend of a live workspace marketplace built on Next.js and React with TypeScript throughout. I led the automated migration off a legacy stack, mapping the old structure onto the new one and moving data per entity through API endpoints or CSV exports while the product stayed live, taking it from 2,000 to 4,500 plus users. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, and an AI listing bot that turns a workspace brochure into a drafted listing with a human in the loop.

At UltraStrategy, I built the CV parsing pipeline behind the platform: a user uploads a CV, the pipeline extracts the data and scores role relevance using Affinda and the Claude API, and a standardised Ultra CV is generated for the frontend.

At Urlink, I built the platform and its UI with AI assisted development on Next.js and Supabase, and implemented the automations clients asked for.

I hold Italian EU long term resident status. I am not currently authorised to work in Germany and would need the applicable employer side permit or sponsorship process. I am ready to relocate to Berlin and complete that process.

I use Claude Code daily and would be glad to bring that habit to a team that already builds the same way.

Regards,
Prabhavit Gupta
