Dear Campari Group hiring team,

I am applying for the Global ML Engineering role in Sesto San Giovanni. I have three years of experience against the 7+ years asked for, and I want to be upfront about that from the start. I also have not run classical forecasting or optimisation models in production, and I have not worked with Azure Machine Learning or Databricks. What I do have is three dense years, eight companies, spent shipping AI and data pipelines from prototype to production, the same industrialisation problem this role is built around, just applied to LLM-based systems rather than time-series models.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific types of roles, the result is shown in the frontend, and a standardised profile is then generated. Affinda and the Claude API handled the parsing and generation, and the extraction tool itself was built with n8n and Eden AI. It is a production scoring system that moved from a manual, one-off process to something repeatable and monitored, which is the same shift this role is asking for with forecasting and pricing models.

At FlowSpace, I led the automated migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and choosing the migration path per entity, API endpoints or CSV exports, while the product stayed live and grew from 2,000 to 4,500+ users. I also built and operate an AI listing bot that turns a brochure in any format into a structured, drafted listing with a human review step, and shipped API integrations with OfficeRnD and Nexudus plus CRM and GTM automations.

I also built the AI-assisted platform and client automations at Urlink, and integrated Google APIs into AI tools that surface courses, internships and jobs at Get2Germany. My production stack is TypeScript, Python, n8n and LLM APIs, and I use Claude Code daily. I am a fast learner and would put real effort into closing the forecasting and MLOps-tooling gap quickly if given the chance.

I am authorised to work in Italy with no sponsorship required, and available to start immediately.

Regards,
Prabhavit Gupta
