Dear Cavendish Professionals hiring team,

I am writing to apply for the Forward Deployed Engineer role in Warsaw. Your posting describes taking technical projects from initial requirements through to production, building AI and automation solutions, and owning delivery end to end. That is the shape of my last three years of work.

At FlowSpace, I built and still own an AI listing bot: given a workspace provider's brochure in any format, PDF, website, photo or spreadsheet, the pipeline drafts a full listing with a human in the loop and sends it to the backend, over 900 drafts produced. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, and shipped API integrations with OfficeRnD and Nexudus for automated bookings. I worked daily with the Claude API and Claude Code inside that codebase, plus TypeScript and n8n for the automation layer.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and assesses how relevant the candidate is for specific roles, the result is delivered to the frontend, and a standardised CV is generated. Affinda and the Claude API handled the parsing and generation, and the underlying extraction tool was built with n8n and Eden AI.

I have three years of professional experience against the 5 or more years asked for here. What I bring in that time is production ownership across the full lifecycle of AI and automation systems, from architecture through to monitoring what is live, across eight companies in Europe.

I hold Italian EU long-term resident status. I am not currently authorised to work in Poland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
