Dear Hiring Manager,

I am applying for the AI/ML Engineer role at Central Consulting Company. Translating models into results for real businesses on EU-funded projects is exactly the kind of applied work I want to keep doing.

At FlowSpace I built and shipped a production LLM extraction pipeline that has drafted 900+ workspace listings from documents in any format, with validation rules and human review before anything reaches the backend. I also built RAG-backed support agents that answer against live platform data and escalate to a human on low confidence, evaluating their accuracy as I iterated. Day to day I work in Python, build data tooling around Supabase and PostgreSQL, and deploy models and agents through APIs that other teams and customers actually use.

My ML depth is working knowledge, fine-tuning basics, embeddings, and evaluation, built while shipping production LLM systems rather than through research. That is a fair description of where I am strongest: taking a model from proof of concept to something a business team can rely on.

I am based in Venice, Italy, hold an Italian EU long-term residence permit, and am ready to relocate to Sofia, with the employer-side permit process to follow.

Regards,
Prabhavit Gupta
