Dear Chalk Hiring Team,

I am writing to apply for the Forward Deployed Engineer role. I have three years of professional experience building AI driven platforms and automations end to end, and working directly with customers to turn requirements into shipped, production features.

At FlowSpace, a live workspace marketplace, I built an AI tool that turns a provider's brochure, in any format, into a drafted listing with a human in the loop, over 900 produced so far, and I shipped the OfficeRnD and Nexudus API integrations behind automated bookings. I also built support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, the same discipline of reliability that customer facing infrastructure needs.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and scores how relevant that person is for specific roles, the result is shown in the frontend, and a standardised CV is then generated. I also built the platform serving different user profiles.

I write in Python, TypeScript and SQL, and I am comfortable moving between engineering, architecture and direct customer conversations, which is where I have spent most of my time so far. I hold Italian EU long-term resident status and can work remotely from Italy; I would also be glad to relocate to Ireland and complete the applicable employer-side permit process if the role requires it.

I would welcome the opportunity to discuss how I could contribute to Chalk's customer implementations.

Regards,
Prabhavit Gupta
