Dear Client Server team,

I am applying for the Backend Software Engineer role in Milan. I want to be upfront from the start: my backend experience is in TypeScript/Node.js, Laravel (PHP) and Python, not Java or Scala. I do not have production experience in either language, and I am not claiming otherwise. What I do have is three years of hands on backend work building and owning REST APIs in production, and a track record of picking up new stacks fast across eight European companies, so I am ready to learn Scala on the job as the posting allows.

At FlowSpace, a live workspace marketplace, I own the backend end to end: I drove the migration from a legacy stack to Next.js and Laravel, mapping the old data model to the new one and choosing the migration path per entity, while the product stayed live and scaled from 2,000 to over 4,500 users. I also shipped REST integrations with OfficeRnD and Nexudus for automated bookings, and built CRM and GTM automations on top of the same APIs.

At Clubee, a SaaS platform in Luxembourg, I integrated the Clubee API across the frontend and ran unit testing and QA on every new feature, which is where I built the habit of writing well tested code before shipping it.

I am based in Venice, authorised to work in Italy without sponsorship, and can be in the Milan office twice a week as the role requires.

Regards,
Prabhavit Gupta
