Dear CloudFactory team,

I am writing to apply for the Forward Deployed Engineer role. I have three years of experience building production automation and AI systems directly with clients, moving proof-of-concept ideas into workflows that operate reliably, which matches the product readiness and hands-on engineering this role calls for.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500 plus users. I built the OfficeRnD and Nexudus API integrations for automated bookings, an AI listing bot that turns a brochure in any format into a drafted listing with a human in the loop, and support AI agents that answer customer queries from live data and escalate on low confidence.

At Urlink, I worked as both developer and project manager on an AI assisted platform build, taking client requirements directly and implementing the automations they needed on Next.js and Supabase, deployed through Netlify and GitHub. That mix of technical delivery and direct client contact is close to the client facing engineering depth this role asks for.

I use Claude and Claude Code daily in my own workflow and I am comfortable building APIs, connectors and data pipelines end to end. I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to CloudFactory's Forward Deployed Engineering team.

Regards,
Prabhavit Gupta
