Dear Cloudflare Hiring Team,

I am writing to apply for the Senior Forward Deployed Engineer role based in Sweden. I have spent the last three years embedded directly inside client and product organisations, shipping production code rather than advising from the side, and that is exactly the posture this role asks for.

At FlowSpace, I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I built and still own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, and I built support AI agents that read live platform data and escalate to a person on low confidence. I worked daily with Claude Code and Claude API inside that codebase, which is the same AI-native, ship-first way of working the role describes.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant the candidate is for specific roles, the result is shown in the frontend, and a standardised CV is generated. I used Affinda and the Claude API for the parsing and generation, and also built the platform serving different user profiles.

I have three years of professional experience against the 7 plus years typically expected for this role, and I do not carry production experience in Rust or Go. What I bring is real production ownership at smaller scale, direct client embedding, and a genuine habit of using AI tools to move faster rather than slower.

I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Forward Deployed Engineering team.

Regards,
Prabhavit Gupta
