Dear Cloudflare Hiring Team,

I am writing to apply for the Forward Deployed Engineer, Professional Services role in Lisbon. I have spent the last three years embedded directly inside client and product organisations, translating business requirements into shipped, production solutions rather than advising from the side, which is the core of what this role asks for.

At FlowSpace, I took over a live workspace marketplace and shipped OfficeRnD and Nexudus API integrations for automated bookings alongside CRM and GTM automations, all while the product stayed live and grew from 2,000 to 4,500 plus users. I also built support AI agents that read live platform data and escalate to a person on low confidence, which meant working daily as the technical point of contact translating what customers actually needed into working configurations and code.

At Urlink, I worked as project manager and developer at once, gathering client requirements directly and turning them into platform automations and AI-assisted builds on Next.js and Supabase. That role was pure client-facing technical delivery: understanding what a client needed, then building and shipping it myself.

I have three years of professional experience and no hands-on production experience with Cloudflare's own security stack (WAF, DDoS mitigation, Bot Management) or Terraform-managed infrastructure. What I bring is a genuine habit of sitting close to customers, translating their requirements into practical solutions, and shipping them, plus daily use of AI tools such as Claude Code to move faster.

I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Professional Services team.

Regards,
Prabhavit Gupta
