Dear Comply365 team,

I want the role that owns a customer's onboarding end to end, not the version split between an engineer and a PM. At FlowSpace I was that hybrid: I built the integrations myself, ran the rollout, and stayed the point of contact when something broke.

Concretely: I shipped OfficeRnD and Nexudus API integrations that live workspace operators use for bookings today, built an LLM pipeline that has drafted 900+ workspace listings for human review, and built support AI agents that answer against live platform data and escalate to a person on low confidence. I worked discovery through rollout with the internal team, an external agency, and members, on Next.js, Laravel, Supabase, and Python.

CoAnalyst's problem, regulated aviation data, enterprise customers, SSO and SAML federation into their identity providers, is the same shape of hard: real integration work with a real customer on the other end, not a demo. That is the work I want more of.

I am based in Venice, Italy, and ready to relocate to Barcelona for this role. I hold Italian EU long-term resident status; I am not yet authorised to work in Spain and would need the employer-side permit process, which I am ready to start.

Regards,
Prabhavit Gupta
