Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer role in Munich. I have three years of experience translating customer operational problems into working technical builds, connecting fragmented systems and data, and deploying the result directly into a live environment, which is the core of this role.

At Get2Germany, based in Berlin, I integrated Google APIs to track platform activity, built AI tools that find courses, internships and jobs for users, and optimised the underlying database, using n8n and the Google API ecosystem. That work was about connecting external data sources into a single usable system and iterating quickly with a small team.

At FlowSpace, a live workspace marketplace, I built and own an AI listing bot that ingests a provider's brochure in any format, PDF, website, photo or spreadsheet, and drafts a full structured listing with a human in the loop, over 900 drafts produced. I also shipped OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations, all built with the Claude API, n8n and TypeScript, while the product stayed live and grew from 2,000 to over 4,500 users. That is the same pattern this role needs: connecting a customer's real systems and data to a platform and turning it into a working, measurable outcome.

I speak English at a professional working level, Hindi natively, and Italian conversationally.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Germany and complete that process.

Regards,
Prabhavit Gupta
