Dear Danfoss Hiring Team,

I am writing to apply for the Forward Deployed Engineer, Digital Tools and AI role in Sofia. Over the past three years I have worked as the engineer who sits between a business problem and a working AI or automation solution, across eight European companies, and that is exactly the bridge this role asks for.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel while the product stayed live, mapping the old structure to the new one and choosing the migration path per entity, either API endpoints or CSV exports. The platform grew from 2,000 to 4,500 plus users during that period. I also built and still own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full listing with a human in the loop, more than 900 drafts so far, and I built support AI agents that answer customer queries from live data and escalate to a person on low confidence.

At UltraStrategy, I built the CV parsing pipeline behind the platform. A user uploads a CV, the pipeline extracts the data with Affinda and scores how relevant the candidate is for specific role types, the result reaches the frontend, and the pipeline then generates a standardised Ultra CV using the Claude API. That pipeline was built with n8n and Eden AI, and it follows the same pattern this role asks for: take a business problem, prototype fast, and turn it into something that keeps working once real users touch it.

I work daily with APIs, SQL, Python for automation and LLM pipelines, and n8n for workflow automation, and I am comfortable moving between technical and non technical stakeholders to validate an idea before it becomes a bigger build.

I hold an Italian EU Long Term Residence Permit. I am not currently authorised to work in Bulgaria without the applicable employer side permit or sponsorship process, and I am ready to relocate and complete that process for this hybrid role in Sofia.

Regards,
Prabhavit Gupta
