Dear Databricks Hiring Team,

I am applying for the AI Forward Deployed Engineer role in France. I want to be upfront: I have three years of professional experience, and the shape of that work has consistently been sitting close to a customer, shipping AI systems that run against their real data in production rather than in a demo.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, chose the right path per entity, API endpoints or CSV exports, and drove the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full listing with a human in the loop, and support AI agents that answer customer queries from live platform data in production and escalate to a human when confidence is low.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration. I also spent time at Get2Germany integrating Google APIs and building AI tools that find courses, internships and jobs.

I hold Italian EU long-term resident status. I am not currently authorised to work in France and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and comfortable with regular on-site time alongside a customer's team.

I would welcome the chance to talk through how I would approach owning a production rollout end to end for a Databricks customer.

Regards,
Prabhavit Gupta
