Dear DevRev hiring team,

I am applying for the Senior Forward Deployed Engineer role in Ljubljana. I have three years of professional software engineering experience, spent building integrations and AI-driven automations directly inside customer workflows rather than in a general-purpose product team.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel, mapping the old data structure to the new one and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and own an AI listing bot that turns a provider's brochure in any format into a structured listing with a human in the loop, and support AI agents that answer customer queries from live platform data and escalate to a human on low confidence, plus OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations for lead capture, enrichment and routing.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated. Affinda and the Claude API handled the parsing and generation, with n8n and Eden AI for the surrounding orchestration, which is the same shape of work as designing and shipping AI-driven integrations and automations across a customer's workflow.

I hold Italian EU long-term resident status. I am not currently authorised to work in Slovenia and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process.

I would welcome the chance to talk through how I would approach owning the technical relationship on a complex customer integration end to end.

Regards,
Prabhavit Gupta
