Dear hiring team,

I am applying for the Forward Deployed Engineer role in Munich (ref. BBBH7225). I want to be upfront: I have three years of professional experience, and the shape of that work has consistently been sitting inside a customer's environment, connecting their existing systems, and shipping AI agents that solve real operational problems.

At FlowSpace I automated the migration of a live workspace marketplace off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, chose the right path per entity, API endpoints or CSV exports, and drove the cutover entity by entity while the product stayed live and grew from 2,000 to 4,500+ users. I also built support AI agents that answer customer queries from live platform data in production, escalating to a human when confidence is low, and shipped OfficeRnD and Nexudus API integrations for automated bookings.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform end to end: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific kinds of roles, the result is shown in the frontend, and a standardised Ultra CV is generated, using Affinda and the Claude API for parsing and generation and n8n and Eden AI for the surrounding orchestration. That is the closest experience I have to connecting messy real-world systems and data sources into a working agent, which is what this role asks for across PLC, SCADA, MES and ERP integrations.

I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Munich and am comfortable working on-site with customers.

I would welcome the chance to talk through how I would approach the first customer deployment.

Regards,
Prabhavit Gupta
