Dear Devoteam Hiring Team,

I am writing to apply for the Forward Deployed Engineer, GenAI role in Prague, working directly with clients to design, build and deploy agentic GenAI solutions in production. I have three years of experience doing exactly this: taking AI systems from prototype to production and integrating them into existing enterprise landscapes.

At FlowSpace I took over a live coworking marketplace and automated its migration off a legacy stack onto Next.js and Laravel, mapping the old data structure onto the new one and driving the cutover while the product stayed live, growing the platform from 2,000 to 4,500plus users. I built and own a support AI agent that answers customer queries directly from live platform data and escalates to a human on low confidence, plus an AI listing bot that turns a workspace provider brochure in any format into a structured, human-reviewed listing, with 900plus drafts produced. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At UltraStrategy I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and assesses how relevant the candidate is for specific role types, the result is shown in the frontend, and a standardised Ultra CV is then generated. Affinda and the Claude API were used for the parsing and generation, and the extraction tool itself was built with n8n and Eden AI.

Both roles required turning early ideas into production-ready applications directly alongside the people who would use them, which is the core of what this role asks for.

I hold Italian EU long-term resident status. I am not currently authorised to work in Czechia and would need the applicable employer-side permit or sponsorship process; I am ready to relocate or work on-site with clients there and to complete that process.

Kind regards,
Prabhavit Gupta
