Dear Domino Data Lab Hiring Team,

I am writing to apply for the Forward Deployed Engineer, Life Sciences role in Berlin. Over the past three years I have worked as the engineer embedded inside a live product, shipping production code and staying with it until it actually works for the people using it, which is the core of what this role asks for.

At FlowSpace, I took over a live workspace marketplace and drove the data migration off a legacy stack onto Next.js and Laravel: I mapped the old structure to the new one, chose the migration path per entity through API endpoints or CSV exports, and ran the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built and still own an AI listing bot and support AI agents that run in production against real customer data with a human in the loop and confidence-based escalation, so I am used to owning an AI workflow past the demo stage and into something a business depends on daily.

At UltraStrategy, I built the CV-parsing pipeline behind the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that candidate is for specific types of roles, the result is delivered to the frontend, and the pipeline generates a standardised profile using the Claude API. I built this with n8n and Eden AI, tuning the extraction and scoring logic to keep results consistent as inputs varied, and I paired it with client-driven automation work at Urlink, where I worked directly with the client on requirements while building the platform and its logic.

Life sciences is a new vertical for me, and I say that plainly rather than stretch a claim. What I bring instead is the pattern this role runs on: sit inside a customer's environment, build something they could not have shipped as fast without me, and keep iterating once it is live. My day-to-day stack is Python, TypeScript and SQL, with working knowledge of Docker for packaging services.

I hold Italian EU Long Term Residence status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process; I am ready to relocate and complete that process for the Berlin role.

I would welcome the opportunity to discuss how I could contribute to the Life Sciences Customer Engineering Solutions team.

Regards,
