Dear Ecomate team,

I am writing to apply for the Senior Software Engineer role in Milan. I have three years of professional experience, from August 2023 to today, building AI-native products and owning production platforms end to end, and I am drawn to the dual challenge you describe: a deterministic, auditable core alongside an AI-native product layer.

At FlowSpace, a live workspace marketplace, I took over the platform and automated its migration off a legacy stack onto Next.js and Laravel. I mapped the old data structure to the new one, chose the migration path per entity through API endpoints or CSV exports, and drove the cutover while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I also built an AI listing bot that turns a brochure in any format into a drafted listing with a human in the loop, and support AI agents that answer from live platform data and escalate to a person on low confidence, alongside API integrations with OfficeRnD and Nexudus for automated bookings.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores role relevance, the result reaches the frontend, and a standardised profile is then generated. I used Affinda and the Claude API for parsing and generation, and n8n with Eden AI for the extraction tool itself.

I hold Italian EU long-term residence, am authorised to work in Italy without sponsorship, and am based in Venice with immediate availability in Milan. I would welcome the chance to discuss how I can contribute to Ecomate.

Best regards,
Prabhavit Gupta
