Dear Efficio team,

I am applying for the Data Engineer II (Python & Cloud) role in Lisbon. I like that this role draws a clear line between a script and a software module, and the ownership that comes with the complete data journey from ingestion to consumption.

At Get2Germany I integrated Google APIs into the platform, optimised the underlying database, and built automation tools that search live sources for courses, internships and jobs, so the API and data-quality side of this role is familiar ground. At FlowSpace I extended that into an AI pipeline that ingests brochures in any format, PDF, website, photo or spreadsheet, extracts and cleans the data, and delivers it to the platform backend through a human-reviewed step, producing over 900 draft listings. I also built the Playwright test suite that keeps that pipeline and the wider app reliable, which matches the emphasis here on error handling and test coverage rather than one-off scripts.

My hands-on stack is Python for data extraction and automation, SQL, REST APIs and JSON, Git, and Docker at a working-knowledge level. AWS and Terraform would be new tooling for me, though the underlying discipline, provisioning reproducible infrastructure rather than clicking through a console, is the same instinct I bring to everything else.

I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and I am available immediately.

Regards,
Prabhavit Gupta
