Dear EnBW IT-Solutions hiring team,

I am applying for the AI Full Stack Developer role in Lisbon. At FlowSpace, I built and shipped the AI layer end to end, including a listing pipeline that takes a brochure in any format, extracts structured data with an LLM, and pushes drafts to the backend after a human review step, plus support agents that answer customer queries against live platform data and escalate on low confidence. That is close to the orchestration and tool integration work your Agentic Factory team describes.

My stack is TypeScript and Next.js on the frontend, Laravel and Python on the backend, and REST APIs for the integrations themselves, including OfficeRnD and Nexudus for live booking data. I use Claude Code daily to build and ship these systems, and I understand where it speeds up delivery and where a human still needs to check the output. I also helped migrate FlowSpace from a legacy stack to a coded Next.js and Laravel product while it stayed live, scaling it from 2,000 to 4,500 plus users, and worked across an internal team, an external agency, and customers to get features into production.

I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Lisbon and complete that process.

I would welcome the chance to bring this agentic AI and full-stack background to the Agentic Factory team.

Regards,
Prabhavit Gupta
