Dear ENDGAME Hiring Team,

I am writing to apply for the Forward Deployed Engineer role based in Amsterdam. Your posting describes owning the full lifecycle, analyze, design, implement, release, operate, and turning ambiguity into shippable software with AI tooling. That is the way I have worked for the last three years.

At FlowSpace, I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, mapping the old structure to the new one and choosing the migration path entity by entity. The platform grew from 2,000 to 4,500 plus users during that work. I also built and still own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, plus support AI agents that read live platform data and escalate to a person on low confidence. I worked daily with TypeScript, Next.js, Node.js, Laravel and Claude Code inside that codebase.

At Urlink, I worked as project manager and developer on an AI-assisted platform build: Next.js and Supabase on the frontend and data layer, with client-driven automations implemented directly from stakeholder requirements. That combination of building fast with AI tools while staying accountable for the client outcome mirrors the BYOTS, ship-first culture you describe.

I have three years of professional experience against the senior-level expertise this role asks for, and my production background is Node.js, TypeScript, Next.js and Laravel rather than .NET or the Cloudflare edge stack specifically. What I bring is real ownership of production systems end to end, direct client embedding, and daily use of AI tooling to move faster.

I hold Italian EU long-term resident status. I am not currently authorised to work in the Netherlands and would need the applicable employer-side permit process. I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
