Dear Hiring Manager,

I am applying for the Technical Support Engineer role at EnduroSat.

At FlowSpace, I supported a live marketplace end to end: built RAG-backed support agents that answer customer queries against live platform data and escalate to a human when confidence is low, maintained OfficeRnD and Nexudus API integrations for operators running real bookings, and was often the one diagnosing why a production booking flow broke. I worked directly with customers and engineers to reproduce issues and coordinate fixes, and use Python for automation. I read code well enough to talk through a technical issue with engineers even when I am not shipping the fix.

Satellite systems are new to me, but the shape of this role, a customer problem, engineers who need a clear reproduction, and a case that has to move, is what I have been doing. I learn new systems fast by necessity: eight companies in three years, different stacks and domains.

I am based in Venice, Italy, and ready to relocate to Sofia. I hold an Italian EU long-term residence permit, which does not itself authorise me to work in Bulgaria, so I would need an employer-side permit and am ready to start that process.

Regards,
Prabhavit Gupta
