Dear Hiring Manager,

I am applying for the Solution Architect role at Exelab. Your model, pairing a Solution Architect with a Value Builder, owning technical delivery end to end while staying hands-on in the codebase, is close to how I already work.

At FlowSpace, a workspace marketplace platform, I own technical delivery as Lead Developer. I led the live migration off a legacy stack onto Next.js and Laravel, mapping the old data model to the new one and choosing an API or CSV export path per entity, while the product stayed live and grew from 2,000 to more than 4,500 users. I built the OfficeRnD and Nexudus integrations that power automated bookings, the CRM and GTM automation layer, and AI support agents that answer from live platform data and escalate to a human on low confidence.

I have also built the AI and data side of a solution end to end. At UltraStrategy, I built a CV-parsing pipeline using Affinda and the Claude API, integrated into the platform so a user's CV is scored for role relevance and turned into a standardised profile. At Get2Germany, I integrated Google APIs and built automation tools that surface courses, internships and jobs, using n8n.

I have three years of hands-on delivery across these projects, not the seven the posting lists, but the pattern is the one you are asking for: taking technical ownership of a project, staying close to the code, and using AI tools deliberately as part of the build, which is how I already work with Claude Code day to day. I am based in Venice, authorised to work in Italy, and available immediately.

Regards,
Prabhavit Gupta
