Dear F24 Hiring Team,

I am writing to apply for the Junior Software Engineer role on the Services team. I have three years of professional experience shipping backend features and API integrations in production, and this role is a natural next step working with Node.js, TypeScript and event-driven systems at scale.

At FlowSpace, a workspace marketplace, I worked as lead developer on the automated migration off a legacy stack onto Next.js and Laravel: I mapped the old data structure to the new one, moved each entity through API endpoints or CSV exports, and kept the product live through the cutover while it grew from 2,000 to 4,500+ users. I also shipped the OfficeRnD and Nexudus API integrations behind automated bookings, and built support AI agents that read live platform data and escalate to a human on low confidence.

At Get2Germany, I integrated Google APIs into the platform and built the AI tools that find courses, internships and jobs, working with n8n to wire the automations together and optimising the underlying database.

I am comfortable with TypeScript, RESTful APIs and Docker, and keen to grow into event-driven systems and microservices at F24's scale. I hold Italian EU long-term resident status. I am not currently authorised to work in Croatia and would need the applicable employer-side permit or sponsorship process, and I am ready to relocate and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Services team.

Regards,
Prabhavit Gupta
