Dear FAO Hiring Committee,

I am applying for the Information Technology Developer (various profiles) consultancy with the Digital FAO and Agro-Informatics Division, for the Web/Software Developer profile. I am a full-stack developer with three years of production experience across eight European companies, most recently as Lead Developer at FlowSpace.

At FlowSpace, a coworking marketplace, I led the automated migration of the platform's data off a legacy stack onto Next.js and Laravel: mapping the old structure to the new one, choosing the migration path per entity through API endpoints or CSV exports, and driving the cutover while the product stayed live and grew from 2,000 to 4,500+ users. I also built an AI listing bot that turns provider brochures in any format into drafted listings with a human in the loop, over 900 produced, support AI agents that answer customer queries from live platform data and escalate on low confidence, and shipped OfficeRnD and Nexudus API integrations for automated bookings. Stack: TypeScript, Next.js, Node.js, Laravel, n8n and the Claude API.

At Clubee in Luxembourg, I integrated the Clubee API across the frontend and ran unit testing and quality assurance on new features, alongside building shop, domain-integration and federation-dashboard tools, work that mirrors the collaborative, test-driven development this role asks for.

I work daily in JavaScript, TypeScript, React-based front ends, Node.js, Python and SQL, and I am comfortable in agile teams translating requirements into working software. I hold Italian EU long-term resident status and am authorised to work in Italy without sponsorship.

Kind regards,
Prabhavit Gupta
