Dear Hiring Manager,

I am applying for the Forward Deployed System Integration Engineer - L2 role in Delft. I should be upfront that I have not worked with UAV hardware, flight controllers, or drone platforms before. What I can offer is three years of taking ownership of forward-deployed, field-facing technical work: travelling to where the problem is, integrating with whatever system is already running, and reporting back what actually works.

At FlowSpace, a coworking marketplace, I took over a live platform and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and choosing the migration path per entity while the product stayed live. I also shipped OfficeRnD and Nexudus API integrations that connect booking systems into the live product, and built an AI pipeline that turns operator brochures in any format into structured listings after human review.

At Urlink I worked directly with client requirements, implementing automations and platform logic on the ground with the client rather than at a distance, on Next.js, Supabase and GitHub.

I am comfortable with regular travel and short deployments, and I pick up new technical domains quickly, as shown by moving across eight different companies and stacks in three years. I am based in Venice, Italy, and hold Italian EU long-term resident status; for a role in the Netherlands I would need the applicable employer-side permit or sponsorship process, which I am ready to complete.

Regards,
Prabhavit Gupta
