Dear Fever Hiring Team,

I am writing to apply for the Graduate Software Engineer role in Madrid. I want to be upfront from the start: I have three years of professional experience rather than none, and a Bachelor's degree in Philosophy, International Studies and Economics rather than an engineering degree. What I can offer instead is production experience across eight European companies in that time, which I believe is relevant even to a graduate-track role.

At FlowSpace, I have been the lead developer on a live workspace marketplace, driving its migration off a legacy stack onto Next.js and Laravel while the product stayed in production and grew from 2,000 to 4,500+ users. I also shipped the OfficeRnD and Nexudus API integrations for automated bookings, so I am used to owning a feature end to end and working across the systems around it.

At Urlink, I worked as a freelance developer and project manager, building the platform and its logic end to end and turning client requirements directly into shipped automations. Between these two roles I have covered full-stack ownership, API integration and direct product decisions, which is the range I would bring to a graduate engineering team.

I am ready to work onsite from the Madrid offices. My Spanish is currently basic; I am fluent in English and continuing to build my Spanish.

For transparency: I hold Italian EU long-term resident status. I am not currently authorised to work in Spain and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Madrid and complete that process.

I would welcome the opportunity to discuss how I could contribute to the team.

Regards,
Prabhavit Gupta
