Dear Filed team,

I am applying for the Fullstack AI Developer (Python/React) role in Stockholm. Your job description is candid about the hard part: agentic systems that have to hit a professional's level of accuracy, not a benchmark you invented. That is the work I want.

At FlowSpace I owned that problem end to end. I built and ran AI agents on live platform data, including a confidence threshold that escalates to a human instead of guessing, and a listing bot that turns a brochure in any format into a structured record with a human in the loop before it ships. Both had to hold up in front of real users, not just in a demo. I also shipped the fullstack features around them, migrating the platform to a Next.js and Laravel stack while scaling it from 2,000 to 4,500 plus users, and wired the integrations, OfficeRnD and Nexudus among them, that kept the data those agents depend on current.

My day to day stack is TypeScript and Python, with n8n and direct LLM API work for the agent and evaluation layer. Earlier, at Clubee, I ran unit testing and QA on every feature I shipped, the same instinct your evaluation and verification systems need.

I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Stockholm and complete that process.

Regards,
Prabhavit Gupta
